

How to Add songs to Markin Kalpataru

1. create the song name in assamese in gif format like this :

আই মোৰ সোনৰে অসমৰ

2. name it as song id after deciding what song id it should be after, step 3

3. log on to server box open the libsong file :

.. _scaled_down/MK_SONGS/hlb_libsong.php

decide what song id would be appropriate and at the end add a line like this :

```
$Songs{'bh270'} =  
"xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx.../2025_add/april/ai_mor_xonore.mp3";
```

where 2025_add is the directory of year added, april is the month added

Now put the mp3 audio file in the filesystem on appropriate directory location.

Note : If you see 4 digit random number on some directory names, know that those are machine created and changes, if any hack attempt were made – MK Sentry checks for illegal access every 5 min on the server, 24/7 !

4. Now go back to step 2 and rename the song .gif file as song_id.gif
for example this could be bh270.gif

আই মোৰ সোনৰে অসমৰ

5. log in to mysql database on server using shell or database browser like adminer / phpmyadmin

with username / password as listed on db.php on root directory
abhib@nripen:~/Public/MK_DreamChild/_scaled_down/db.php

on the db: markinorg, go to songs table clone the last line and change appropriate column such as genre, artist, mk_song_id (eg bh270 as example) , name (in english), lyricist etc etc .. but keep the id column empty, as it will automatically populate in serial order.

id ↓ =	genre	artist	mk_song_id	name	name_as	icon	movie	album	ad_url	lyricist
--------	-------	--------	------------	------	---------	------	-------	-------	--------	----------

thats it ...

reload the page, search for the song .. it should work !
